

VideoMail

Effective Messaging Delivered Through Video

Add functionality to your messaging environment by introducing VideoMail, which allows users to send personalized video messages and recorded screen captures through e-mail. There are numerous applications for VideoMail technology, including IT troubleshooting, design reviews, sales and marketing. For individuals, VideoMail means a richer messaging experience.

VideoMail enables users to:

- Create and Deliver Video Messages and Screen Captures via E-Mail
- Record and Play Back Voice and Video Messages from Microsoft® Outlook®
- Listen to the Audio Portion of Video Messages over the Phone
- Communicate with Clients and Co-Workers Unlike Ever Before With One-Stop Access to Voice and Video Messages from one Common System

Supported:

- As a Stand-Alone Application to Exchange Integrated Messaging Products

VideoMail extends the Unified Communications capabilities of the e-mail client you're already using to include embedded video and animated screen capture files. Compressed file sizes allow for ease of distribution, low impact to networks, and fast message delivery. And the intuitive interface of VideoMail makes it as easy to record and send a video or animated screen capture file as it is to compose and send a regular e-mail.

For nearly 30 years, AVST has been shaping the evolution of communications, with more than 15 million users worldwide. As the world of communications advances, you can be assured that the award winning products from AVST have your future covered.
